

IN THE SPECIFICATION:

Please substitute the following substitute paragraph for the paragraph extending between page 4, line 10 and page 4, line 19, as follows:

B1 For example, the present invention can operate in conjunction with a display 20, shown in FIG. 2, contained on a mobile phone or cell-phone. In this display, a series of bars 21, 22 and 23 along the left side reflect various signal strength indications. Whenever the signal quality decision 12 in an active digital mode determines that the Bit Error Rate (BER) is at or near 0.0%, indicators bars 21-23 on the left side are shown constant without blinking. If the signal quality deteriorates such that the BER drops below a minimum value such as a BER greater than 4%, left indicators 21-23 are caused to start blinking. The initiation of the blinking can occur after a preselected time-out such as 0.5 seconds, for example.

IN THE CLAIMS:

Please cancel claim 16 and amend claims 1, 2, 5, 6, 7, 9, 11, 13, 14 and 15 by substituting therefor the following substitute claims:

- B2*
1. (Amended) The method of indicating the quality of a received signal at a mobile phone, the received signal sent to the mobile phone by a remote transmitter, said method comprising the steps of:
SCB C1
- detecting reception of the received signal from the remote transmitter at the mobile phone,
